Jalan Cikopo Selatan, Kabupaten Bogor

A fresh graduate in Actuarial Science who is highly motivated and actively seeking job opportunities in data-related fields. Skilled in machine learning, deep learning, and proficient in using R and Python for data analysis. Passionate about applying analytical skills, statistical knowledge, and programming expertise to solve real-world problems for a dynamic organization. Committed to contributing valuable insights to the team while continuously enhancing data manipulation, machine learning, and data visualization skills.

Pengalaman Kerja

BPS Kota Bogor - Bogor

Dec 2025 - Jun 2026

Statistical Assistant

- Data Validation: Validated 120k+ data entries across multiple sources with 98% accuracy.
- Survey Design: Supported the design and rollout of 2 regional surveys (e.g., Economic Census).
- Data Analysis: Cleaned and processed 10+ datasets using Python and Pandas, cutting processing time by 20%.
- Reporting: Produced 12 statistical reports and visualizations for public and internal use.
- Quality Control: Maintained 100% compliance with official data standards, keeping errors under 2%.
- Data Management: Optimized database storage for 100+ datasets, speeding up retrieval by 30%

Atmi Kreasi Digital - Tangerang

Jun 2025 - Oct 2025

Data Analyst

- Developed internal tools using Google Sheets and App Script, resulting in a 40% increase in workflow efficiency across Business Development and Content teams.
- Built a Content Tracker database that improved tracking accuracy and reduced data entry errors by up to 70%.
- Designed an automated BD Tools database that streamlined client status monitoring and minimized manual reporting tasks.
- Created interactive performance dashboards to enhance data-driven decision-making and improve visibility of team performance.
- Established Standard Operating Procedures (SOPs) to ensure consistent tool usage and structured operational workflows across teams.

BPS Kota Bogor - Kota Bogor

Jun 2023 - Sep 2023

Data Entry

- Database Management: Maintained and managed the database to ensure the accuracy and smooth storage of statistical data.
- Data Entry: Performed precise and systematic data entry to support the validity of information used in analysis and policy planning.
- Data Integrity Assurance: Contributed to ensuring data integrity by verifying and validating datasets.
- Data Processing & Visualization: Assisted the team in processing and visualizing data to support institutional decision-making.

Jenang Pendidikan

Institut Teknologi Sumatera - Lampung Selatan, Lampung

Sep 2020 - Apr 2025

Bachelor of The Actuarial Science program at Institut Teknologi Sumatera (ITERA) equips students with skills in financial risk analysis, insurance, and pension systems through a quantitative approach using mathematics, statistics, and data modeling. Graduates are highly sought after in sectors like insurance, banking, pension funds, investment, and financial technology (fintech). With strong competencies, they are prepared to lead in risk management and data-driven decision-making., 3.18/4.00

Additional Education

- **Junior Data Scientist** 🏆 (2023): Completed a comprehensive program that provided in-depth training in foundational and applied data science. The curriculum covered key areas such as object-oriented programming, basic and inferential statistics, data preparation, exploratory data analysis, and techniques for handling outliers and imbalanced datasets. Participants also gained expertise in predictive modeling, including linear and logistic regression, model validation, binary classification, and A/B testing. The program further explored clustering methods, such as K-Means and RFM clustering analysis, emphasizing customer segmentation and behavioral insights. As a final project, successfully conducted Cluster Segmentation with K-Means, utilizing clustering algorithms to analyze behavioral and transactional data, uncover distinct customer segments, and deliver actionable insights to inform strategic decision-making.
- **Data Science** 🏆 (2024): Completed an intensive data science program focusing on Python for machine learning, database management with SQL, data analysis, mathematical foundations, probability and statistics, machine learning with big data, deep learning, and application programming interfaces (APIs). For the final project, successfully conducted a Sentiment Analysis, leveraging machine learning techniques to preprocess and analyze text data, classify sentiments, and derive actionable insights to support strategic decision-making

- **Projects** (2023): Customer Segmentation Method : Clustering with K- Means and RFM Analysis 2023 Initiated the project's planning phase by defining the objectives, scope, and deliverables to team members to assign tasks effectively. And conducted in-depth analysis of clustering results, interpreting and understanding the characteristics of each voucher segment to derive actionable insights.
