Kabupaten Bogor

A highly motivated Actuarial Science graduate with expertise in data analysis, machine learning, and deep learning. Skilled in Python, SQL, and R for statistical modeling and predictive analytics. Experienced in customer segmentation, sentiment analysis, and database management, with hands-on projects optimizing business strategies and automating data workflows.

Work Experiences

BPS Kota Bogor - BogorJun 2023 - Sep 2023

Staff

BPS Kota Bogor is a non-ministerial government agency responsible for conducting statistical activities and providing high-quality data to support Indonesia's development.

- Managed and optimized a statistical database to ensure 99% data accuracy, supporting national policy planning.
- Conducted data validation and verification, improving data integrity and reducing errors in reports.
- Assisted in data visualization, presenting insights that supported decision-making for government statistics.

Education Level

Institut Teknologi SumateraAug 2020 - Apr 2025 (Expected)

Bachelor of Actuarial Science, 3.18/4.00

- Relevant Courses: Statistical Data Analysis, Time Series Analysis , Actuarial Computing , Financial Computing, Micro Economics, Stochastic Process, Non Parametric Method, Basic Actuarial Programming, Basic Computing and Software

Additional Education

Narasio DataFeb 2023 - Apr 2023

Junior Data Scientist

- Gained expertise in predictive modeling, clustering, and regression analysis for business applications.

Binar AcademyDec 2023 - Apr 2024

Data Science

- Specialized in Python for machine learning, deep learning, SQL, and API development, applying knowledge in real-world projects.

Skills, Project & Achievements

- Soft Skills:** Analytical Thinking, Critical Thinking, Logical Thinking, Leadership, Teamwork, Problem Solving, Communication Skills, Data Storytelling, Collaboration, and Teamwork
- Certification**  (2023): Junior Data Scientist by Narasio Data
- Certification**  (2024): Data Science by Binar Academy
- Final Project Narasio Data**  (2023): Conducted K-Means clustering and RFM analysis to segment customers based on transaction behavior, optimizing sales strategies. Recommended targeted promotions and category expansion, increasing engagement and revenue potential.
- Final Project Binar Academy**  (2024): Developed an RNN-LSTM-based NLP model to classify text sentiment (positive, neutral, negative) with Flask API deployment. Integrated SQLite for storing results, enabling real-time predictions for business applications.
